

# DIY Sidewalk chalk paint!

Supplies you will need:

- 1/4 cup cornstarch
- 1/4 cup water
- Food coloring—I used gel food coloring but you can use liquid food coloring also
- Containers to put paint in
- Paint brushes

Here's how to make it:

1. Mix the water and cornstarch until completely dissolved.
2. Divide the mixture into as many containers as you would like (a muffin tin would be a great idea to mix the colors and have them all in now place).
3. Add the food coloring to the containers, I used gel food coloring but liquid food coloring would also work. Stir and add more color as needed.

You are ready to get outside and start painting!

I didn't have any issues with the food coloring staining the driveway, but be sure to test a spot before if there is a concern for your area.

The fun thing about this paint is you can use it on construction paper also if you are not able to get outside or you don't have a spot to paint outside.

What colors did you create? I would love to see pictures of your artwork on your sidewalk, you can email me at [elevationhandmade21@gmail.com](mailto:elevationhandmade21@gmail.com) or send me a message on instagram [@elevation-handmade](https://www.instagram.com/elevation-handmade)
